PROFESSIONAL SUMMARY

Full Stack Software Engineer (React.js, Next.js, Node.js, NestJS, Python) with 3+ years of experience building web applications across cybersecurity compliance, e-commerce, workforce management, and automotive software. Built React interfaces for 4 connected e-commerce portals, contributed to a test suite of **94** suites with **72.45%** front-end coverage, and developed LLM-based features (RAG, ChromaDB, Ollama) with **92%** rule-extraction accuracy. Experienced with REST APIs, PostgreSQL, MongoDB, MySQL, Docker, and CI/CD.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frontend / Backend: React.js, Next.js, Vue.js, Node.js, NestJS, Express.js, FastAPI, Tailwind CSS, Material UI, Bootstrap, SCSS, REST APIs, Java APIs, .NET APIs

AI / ML: LLMs, RAG, Ollama, ChromaDB, Prompt Engineering, Structured Output Validation

Security: CIS Benchmarks, SSH, WinRM, Security Compliance, Authentication, Authorization, RBAC

Databases: PostgreSQL, MongoDB, MySQL, Redis, TypeORM

DevOps & Testing: Docker, GitHub Actions, CI/CD, Jest, Playwright, ESLint, Git, GitHub, Postman, Linux

Practices: SDLC, Agile, Object-Oriented Programming, Unit and End-to-End Testing, Code Review, Web Accessibility, Responsive Design

PROFESSIONAL EXPERIENCE

Software Engineer

Mar 2026 – Present

Dunify, Lahore, Pakistan

- Develop and maintain features for Octopus VAR, a desktop cybersecurity compliance application that checks network and server configurations against Minimum Security Baselines (MSBs) and CIS Benchmarks over SSH and WinRM.
- Build validation, remediation, configuration-change detection, and compliance reporting features using React.js, NestJS, Node.js, Python, and PostgreSQL.
- Develop AI-based features using LLMs that convert security benchmarks into structured rules, with data validation and export to Excel, reaching **92%** rule-extraction accuracy across **150+** benchmark rules.
- Reduced LLM hallucinations by **40%** using RAG with ChromaDB, schema validation, and prompt constraints, and managed context size (about **4,000** tokens per request) by chunking long benchmark documents.

MERN Stack Developer

Aug 2025 – Mar 2026

Offneo, Lahore, Pakistan

- Developed full stack features for the MegaMarket and Attendix platforms in a **2-person** team using React.js, Node.js, Express.js, MongoDB, TypeScript, and REST APIs.
- Built React user interfaces for 4 connected e-commerce portals, creating shared, reusable components that kept the design consistent across all portals.
- Integrated the front-end applications with a Java REST API and SQL database to keep customer, product, and order data in sync across 4 platforms, including guest checkout and order tracking.
- Built Attendix back-end APIs and location-based features, including a **125-meter** office geofence and automatic employee logout after **15–20 minutes** outside the assigned location without a recorded break.

Web Developer

Jul 2023 – Mar 2025

Codings First, Bahawalpur, Pakistan

- Developed approximately **10%–70%** of the user interface for a Tanzanian automotive management system used in **multiple countries**, covering branch-level asset and operations management.
- Implemented multi-branch features in React.js that let organizations manage showroom assets, daily operations, and branch-specific data, integrated with a **.NET** back end.
- Built dashboards and charts for **profit, loss, and operational performance**, giving management clear reporting on business data.
- Updated key features based on user requirements and feedback, improving usability of frequently used branch and management screens.

SELECTED PROJECTS

Octopus VAR – Cybersecurity Compliance & Configuration Validation octopus-var.com

React.js, NestJS, Node.js, Python, FastAPI, PostgreSQL, Ollama, ChromaDB, Docker, GitHub Actions, Jest, Playwright

- Contributed to a desktop compliance application that connects to network devices and servers over SSH and WinRM and validates configurations against MSBs and CIS Benchmarks.
- Developed features for device discovery, configuration validation, rule management, remediation, configuration-change detection, and Executive and Detailed compliance reports.
- Contributed to an AI-based remediation impact assessment feature using Python and FastAPI, including structured model output, risk scoring, rule-based checks, and fallback handling, cutting invalid or malformed model outputs by **60%** and keeping average response time under **5** seconds.
- Contributed to the CI pipeline and testing setup: approximately **94 test suites**, **72.45% front-end test coverage**, Docker multi-service deployment, TypeScript type checking, linting, production builds, and security checks.

CarOps.io – Automotive Branch & Asset Management System carops.io

React.js, TypeScript, Tailwind CSS, .NET REST APIs

- Developed approximately **10%–70%** of the user interface for a multi-branch automotive management system used in **multiple countries**, covering branch operations, asset management, and business workflows.
- Built responsive dashboards and reusable components using React.js, TypeScript, and Tailwind CSS.
- Integrated REST APIs with the .NET back end to manage branch-specific assets and operational data across showroom locations.
- Built dashboards and charts to analyze branch-level **profit, loss, and operational performance**.

MegaMarket – Multi-Portal E-commerce Platform megamarket.pk

React.js, Node.js, Express.js, MongoDB, Java REST API, SQL

- Developed React interfaces for **4 connected portals**: customer website, mobile application, seller dashboard, and admin management portal.
- Created shared, reusable UI components and design patterns to keep the look and behavior consistent across **4 separate interfaces**.
- Integrated the front-end applications with a Java REST API and SQL database so customer, product, and order data stay in sync across all portals.
- Implemented order workflows that stay in sync across channels, including guest checkout and order tracking without requiring a customer account.

EDUCATION

Bachelor of Science in Information Technology

2024

The Islamia University of Bahawalpur (IUB), Pakistan
